# Scenario 1 – Problem

Context.
- Student was collecting records from various areas in ePortfolio.
- Student wants to track personal progress by developing a structure that will encompass such three dimensions as time, activities/skills, proficiency.
- Student wants to include it later into presentations, sent for feedback, add to job application.

1. Collecting records from various areas

2. Tracking personal progress

Student

Current situation:
*There is no support for step 2*

Questions:
- Have you ever encountered similar problem?
- What tool support solution would you prefer?
Scenario 2 – Problem

Context.
- Student creates presentation about his research project.
- He wants to share it with research community for feedback.
- Members of these community don't have accounts in the ePortfolio system.

1. Create a presentation

ePortfolio system

presentations/views

2. Send a presentation to a research community

Student

3. Give feedback
Community

Current situation:
There is no support for steps 2 and 3.
Users outside of the system can only publicly accessible views.
There are no convenient tools for managing access to views.

Scenario 3 – Problem A

Context:
- Graduate profiles state that students should develop lifelong learning skills.
- Lecturer suggests to students to copy their forum discussions/ marked assignments into their ePortfolio as an evidence of such skills.

Potential for valuable examples/ evidence of lifelong learning skills

Student

Current situation:
There is no support for import/export of records between systems
Questions:
- Have you ever encountered similar problem with your students?
- What tool support solution would you suggest?
Scenario 3 – Problem B

Context.
- Lecturer/course administrator creates a programme graduate attributes/outcomes template in LMS
- Students are asked to fill in the template with the examples of their achievements during study period
- Students collect their examples in the ePortfolio system as it is a more suitable tool with long term access

Current situation:
*There is no support for import/export of records between systems*

Questions:
- Do you think it is a realistic scenario?
- What tool support problem do you see here?
- What tool support solution would you suggest?

Scenario 4 – Problem

Context.
- Students collects a lot of information from various sources in their ePortfolio throughout their study at the university.
- Students can add tags to some records, but there are no other means to structure information.
- When students want to search through the set of records, they can get a list of records which are related to the search as well as not related.

Current situation:
Information in ePortfolio is poorly structured and evolves in time.

Questions:
- Do you see an issue in this scenario?
- How do you structure information in your ePortfolio?
- Is current approach sufficient for you?
